

Environment Policy

Emergent Cold is committed to:

Protecting the environment by the efficient use of energy and resources and being mindful of our role as a caretaker of the environment.

Ensuring that environmental impact considerations are an integral part of our decision making, management and culture.

Maintaining and improving upon our current environmental standard as a responsibility to our people and the communities in which we operate, now and into the future.

To meet this commitment, we will:

- Monitor and comply with all relevant environmental laws and relevant standards and practices.
- Ensure that all our activities and services with the potential to cause environmental impact are identified, management plans developed, and controls implemented.
- Encourage environmental awareness amongst our staff and empower them to be positive and proactive in raising our standards.
- Encourage contractors, suppliers and customers of Emergent Cold to accept responsibility for their actions and to comply with their environmental obligations.
- Implement specific measures to prevent pollution and minimize energy and material consumption and reduce waste at source through 'replace, reduce, recover, reuse and recycle' initiatives.
- Communicate with all our stakeholders and the public on our environmental policy and performance.
